Immediate first aid: Ensure that adequate decontamination has been carried out. If patient is not breathing, start artificial respiration, preferably with a demand valve resuscitator, bag-valve-mask device, or pocket mask, as trained. Perform CPR if necessary. Immediately flush contaminated eyes with gently flowing water. Do not induce vomiting. If vomiting occurs, lean patient forward or place on the left side (head-down position, if possible) to maintain an open airway and prevent aspiration. Keep patient quiet and maintain normal body temperature. Obtain medical attention. Poisons A and B

## SECTION 12: Ecological information

### 12.1 Toxicity

- Toxicity to fish: no data available
- Toxicity to daphnia and other aquatic invertebrates: no data available
- Toxicity to algae: no data available
- Toxicity to microorganisms: no data available

### 12.2 Persistence and degradability

AEROBIC: In 22-day aerobic river die-away tests using several river water samples in 24 microcosms, bisphenol B showed no degradation in 12 microcosms and incomplete degradation in 12 microcosms. In anaerobic biodegradation tests using pond sediment, bisphenol B showed no degradation over the initial 60 days of incubation; after 84 days, approximately 60% of initial bisphenol B still remained(1).

### 12.3 Bioaccumulative potential

An estimated BCF of 250 was calculated in fish for bisphenol B(SRC), using an estimated log Kow of 4.13(1) and a regression-derived equation(1). According to a classification scheme(2), this BCF suggests the potential for bioconcentration in aquatic organisms is high(SRC).

### 12.4 Mobility in soil

Using a structure estimation method based on molecular connectivity indices(1), the Koc of bisphenol B can be estimated to be  $7.4 \times 10^4$ (SRC). According to a classification scheme(2), this estimated Koc value suggests that bisphenol B is expected to be immobile in soil. The estimated pKa of bisphenol B is 10.2(3), indicating that this compound will exist predominately in the non-ionized form in the environment(SRC); the anion form of bisphenol B is not expected to adsorb more strongly to soils containing organic carbon and clay than the neutral counterpart(3).

## 12.5 Other adverse effects

no data available

---

## SECTION 13: Disposal considerations

### 13.1 Disposal methods

#### Product

The material can be disposed of by removal to a licensed chemical destruction plant or by controlled incineration with flue gas scrubbing. Do not contaminate water, foodstuffs, feed or seed by storage or disposal. Do not discharge to sewer systems.

#### Contaminated packaging

Containers can be triply rinsed (or equivalent) and offered for recycling or reconditioning. Alternatively, the packaging can be punctured to make it unusable for other purposes and then be disposed of in a sanitary landfill. Controlled incineration with flue gas scrubbing is possible for combustible packaging materials.
